4 Inputs   2 Outputs   Case

QUICKSTART THE 3GEASY MODULE

Starting at factory Initial setup with a activated SIM card, the module is powered up and Red led flashes, then Flashing Orange led is attempting connections. Wait 10 seconds for the GREEN Led to flash (at 3 secs) to indicates logged on to the mobile network provider.
Then your **Master mobile phone** should be ready for use.

> *ORANGE LED short flashes while trying to **connect** to network up to*
> *30 seconds to connect else Sim not activated or no network found.*
> *RED LED long 5 sec flash for **error** or not acceptable*
> *Or steady for not connected to SIM5126 module*
> *GREEN LED short flash each 3 secs **Network connected OK***
> *BLUE LED fast flashes for 10 seconds on **accepted** commands.*

STARTUP COMMAND

If the Sim is activated, then upon plugging in the charger the Green led should start to flash every 2 seconds if successfully connected.

The **first** mobile incoming call is registered as the MASTER**,** when the message *START* is accepted on a **new** or **factory reset** Unit; Also known as *PAIRING.* The Master phone number is automatically set for Input1 and Input2 Alarm Trigger reports.

Your 3GEasy is now operational and able to immediately,
(1)Operate Access relays,
(2 Report Alarms,
(3) Send Test calls upon SMS Test request.

See "**PROGRAMMING COMMANDS LIST USING SMS SETUP" for**
Message and Address Programming by SMS and other options.
